Fireworks are often used to mark special events and holidays. However, they are not safe in the hands of consumers. Fireworks cause thousands of burns and eye injuries each year. People can enjoy fireworks safely if they follow a few simple safety tips:

**BE CAREFUL!**
- Be safe. If you want to see fireworks, go to a public show put on by experts.
- Do not use consumer fireworks.
- Keep a close eye on children at events where fireworks are used.

**FACTS**
- Fireworks cause an average of almost 18,500 reported fires per year.
- Sparklers account for roughly one-quarter of emergency room fireworks injuries.

**CONSUMER FIREWORKS**
NFPA is opposed to consumer use of fireworks. This includes sparklers and firecrackers. Even sparklers burn hot enough to cause third-degree burns.

**HOW HOT DOES A SPARKLER BURN?**
- Sparklers at 1200 °F
- Glass melts at 900 °F
- Wood burns at 575 °F
- Cakes bake at 350 °F
- Water boils at 212 °F
- Glass melts at 900 °F
